**2. NAME OF THE VETERINARY MEDICINAL PRODUCT**

Tolfedine Tablets 6 mg

**3. STATEMENT OF THE ACTIVE SUBSTANCE (S) AND OTHER INGREDIENTS**

Each tablet contains 60mg tolfenamic acid

**4. INDICATION(S)**

**Cats** – In febrile syndrome (abscess, fever of unknown origin)

**Dogs**- Treatment for alleviation of acute episodes of inflammation and pain in chronic locomotor disease

**5. CONTRAINDICATIONS**

Do not administer to animals suffering from cardiac, hepatic or renal disease, where there is a possibility of gastro-intestinal ulceration or bleeding or where there is evidence of a blood dyscrasia or hypersensitivity to the product.

Do not exceed the prescribed dosage or duration of treatment and do not administer NSAIDs concurrently or within 24 hours of each other. Some NSAIDs may be highly bound to plasma proteins and compete with other highly bound drugs, which can lead to toxic effects. Do not administer in conjunction with glucocorticosteroids.

NSAIDs can cause inhibition of phagocytosis and hence in the treatment of inflammatory conditions associated with bacterial infections appropriate concurrent antimicrobial therapy should be instigated.

In dogs, long term treatment of over 3 months duration should be under regular veterinary supervision. In particular, dogs with hepatic insufficiency should be closely monitored.

Use in animals less than 6 weeks of age, or in aged animals, may involve additional risk. If such a use cannot be avoided, animals may require a reduced dosage and careful clinical management.

Animals suffering from a chronic renal insufficiency and requiring an anti-inflammatory treatment may be treated with tolfenamic acid without requiring an adjustment of the dosage. However, the use of this product is contra-indicated in acute cases of renal insufficiency.

### **Use in pregnancy**

Although studies in laboratory animals did not show any effect on reproduction, it is not advisable to administer the product during gestation.

## **6. ADVERSE REACTIONS**

### **Undesirable effects and overdose**

In case of undesirable effects (anorexia, vomiting, diarrhoea, presence of blood in faeces) occurring during treatment, your veterinarian should be contacted for advice.

Diarrhoea and vomiting may occur in rare cases during the treatment. Moreover, a temporary increase of thirst and/or diuresis may occur. In most cases, these signs cease spontaneously after the treatment.

In case of overdose, administer symptomatic treatment.

## **7. TARGET SPECIES**

Cats and Dogs

## **8. DOSAGE FOR EACH SPECIES, ROUTE(S) AND METHOD OF ADMINISTRATION**

The recommended dosage is 4mg tolfenamic acid/kg bodyweight by oral administration with food once daily for 3 days according to the following table:

Bodyweight (kg)														
	1 - 2	2.5 - 3.5	3.5 - 4.5	4 - 6	6 - 8	8 - 10	10 - 12.5	12.5 - 15	7 - 10	10 - 20	20 - 25	23 - 35	35 - 40	> 45
Number of 6 mg Tablets	1	2	3											
Number of 20 mg Tablets				1	1 1/2	2	2 1/2	3						
Number of 60 mg Tablets									1/2	1	1 1/2	2	2 1/2	3

In dogs subject to clinical response, the administration may be repeated every 7 days, i.e. 3 days of medication followed by 4 days without medication.

## 9. ADVICE ON CORRECT ADMINISTRATION

## 10. WITHDRAWAL PERIOD(S)

N/A

## 11. SPECIAL STORAGE PRECAUTIONS

Keep out of the reach of children

Do not store above 25°C

## 12. SPECIAL WARNING(S)

<User Warnings>

In case of accidental contact with eyes, wash with plenty of water.

For Animal Treatment Only

## 13. SPECIAL PRECAUTIONS FOR THE DISPOSAL OF UNUSED PRODUCT OR WASTE MATERIALS, IF ANY

Any unused veterinary medicinal product or waste materials derived from such veterinary medicinal products should be disposed of in accordance with local requirements.
