#### 4. CLINICAL PARTICULARS

#### 4.1 Target species

Cats over 6 months of age

#### 4.2 Indications for use, specifying the target species

For the treatment of roundworm (Ascarids) and tapeworm infections in cats over six months old

#### 4.3 Contra-indications

Do not treat cats less than 6 months old.

Do not repeat the treatment if vomiting occurs shortly after dosing.

#### 4.4 Special warnings for each target species

Do not treat cats under 0.6 kg (1.5 lb), or less than 6 months old. Do not repeat treatment if the cat vomits after administration.

#### 4.5 Special precautions for use

i. Special precautions for use in animals

Consult a veterinary surgeon before treating animals with a history of epilepsy or severe renal dysfunction. It is important to establish the bodyweight of the animal before treatment to ensure correct dosage administration.

ii. Special precautions to be taken by the person administering the medicinal product to animals

Wash hands thoroughly after handling tablets.

Accidental eye contact – rinse thoroughly with clean running water.

If irritation persists seek medical advice.

Accidental ingestion by humans – drink plenty of water and seek medical advice.

#### 4.6 Adverse reactions (frequency and seriousness)

Dichlorophen may cause excessive salivation in some cats, due to its bitter taste. Idiosyncratic reactions to dichlorophen have been recorded in some animals, characterised by ataxia, depression, and occasionally vomiting.

#### 4.7 Use during pregnancy, lactation or lay

Consult a veterinary surgeon before treating pregnant animals. Nursing female cats should be treated 2 weeks after giving birth and every two weeks until weaning.

## 4.8 Interaction with other medicinal products and other forms of interaction

None known

#### 4.9 Amounts to be administered and administration route

For oral administration

Treatment consists of three doses given at weekly intervals. Administer one pink tablet per 1.3 kg (3 lb) bodyweight on day 1, then one fawn tablet per 1.3 kg on day 8, and one pink tablet per 1.3 kg on day 15. Tablets may be taken whole, or crushed and sprinkled on the cat's food. Do not remove tablets from strip until required for treatment.

Cats should be treated every 3 months.

## 4.10 Overdose (symptoms, emergency procedures, antidotes) if necessary

Piperazine Citrate Dichlorophen

Symptoms: Vomiting and diarrhoea Vomiting

Depression General weakness

Fits

Emergency Procedures: Consult a veterinary surgeon.

Treat symptomatically and supportively.

Keep animal warm and calm.

Symptoms reverse in 24-48 hours.

#### 4.11 Withdrawal period(s)

Not applicable.

#### 5. PHARMACOLOGICAL PROPERTIES

ATCvet codes: QP52AG01, QP52AH01

#### 5.1 Pharmacodynamic properties

Piperazine acts as an anthelmintic by causing nerve paralysis of the worm, with subsequent expulsion.

Dichlorophen is effective against most common cestodes, and also has antibacterial and antifungal properties.

#### 5.2 Pharmacokinetic particulars

The citrate is quickly absorbed in the cat and excreted in the urine.

#### 6. PHARMACEUTICAL PARTICULARS

#### 6.1 List of excipients

Tapeworm tablets (fawn)
Caramel 15712 (E150)
Maize Starch
Pregelatinised Starch
Magnesium Stearate

Roundworm tablets (pink)
Erythrosine Lake (E127)
Cellulose Microcrystalline
Silica Colloidal Anhydrous

Magnesium Stearate

#### 6.2 Incompatibilities

None known.

#### 6.3 Shelf life

Shelf life of the veterinary medicinal product as packaged for sale: 2 years.

#### 6.4 Special precautions for storage

Do not store above 25°C.

Do not remove tablets from strip until required for treatment Any part-used tablets should be discarded.

#### 6.5 Nature and composition of immediate packaging
