Lot {number}

### 16. SPECIAL WARNING(S), IF NECESSARY

For external use only.

If you notice any serious effects or other effects not mentioned on this label, please inform your veterinary surgeon.

#### **Special precautions for use in animals.**

The product is best applied before an anticipated blowfly challenge, or when a blowfly challenge is identified on or in the vicinity of the farm. Established strikes may require a separate treatment with a knockdown insecticide.

It is recommended that animals with dirty back-ends are dagged prior to application.

If dagging or crutching is undertaken in the weeks following application, these animals should be re-treated, otherwise protection could be lost.

Do not apply during heavy rainfall, or when such conditions are expected. The resulting wash out may reduce the protection period.

The use of the product has harmful effects on dung flies.

Treated sheep **must** be kept away from watercourses for at least one hour after treatment. There is a **serious** risk to aquatic life if this advice is not followed.

#### **Special precautions to be taken by the person administering the veterinary medicinal product to animals**

- Operators should wear synthetic rubber gloves, a face mask and PVC trousers when applying the product.

- In case of skin contact remove contaminated clothing and thoroughly wash the affected parts of the body with soap and water.

- In case of eye contact rinse eyes with clean water for several minutes and contact physician for advice.

- In case of ingestion call for medical advice immediately and show the package leaflet or the label to the physician.

- Always wash hands with soap and water after handling sheep and before eating and drinking or smoking.

- Wash hands and exposed skin after working with recently treated sheep.

- Do not eat, drink or smoke whilst using the product.

#### Handling sheep in the weeks following treatment:

- Do not shear sheep in the 3 months after treatment.

- Handle sheep as little as possible after treatment as residues remain on the fleece for some weeks. • If you need to handle sheep after treatment, wear coveralls and Wellington boots. If sheep are wet also wear waterproof trousers and coat.

Special precautions for the protection of the environment:

The use of the veterinary medicinal product has harmful effects on dung flies. Treated sheep must be kept away from watercourses for at least one hour after treatment. There is serious risk to aquatic life if the advice is not followed.

**17. SPECIFIC PRECAUTIONS FOR THE DISPOSAL OF UNUSED PRODUCTS OR WASTE MATERIALS, IF ANY**

Medicines should not be disposed of via wastewater.

The product should not enter water courses as dicyclanil may be dangerous for fish and other aquatic organisms.

Any unused veterinary medicinal product or waste materials derived from such veterinary medicinal product should be disposed of in accordance with local requirements.

Ask your veterinary surgeon or pharmacist how to dispose of medicines no longer required. These measures should help protect the environment.

**18. CONDITIONS OR RESTRICTIONS REGARDING SUPPLY AND USE IF APPLICABLE**

POM-VPS (To be supplied only on veterinary prescription)

## PARTICULARS TO APPEAR ON THE PACKAGE LEAFLET:

### 1 litre container

#### 1. NAME OF THE VETERINARY MEDICINAL PRODUCT

CLIK 50 mg/ml Pour-On Suspension for Sheep.

#### 2. COMPOSITION

**Each ml contains:**

**Active Substance:**

Dicyclanil 50 mg

**Excipients:**

Methyl Parahydroxybenzoate (E218) 1.50 mg  
Propyl Parahydroxybenzoate (E216) 3.00 mg  
Butylated Hydroxytoluene (E321) 0.50 mg  
Ponceau 4R (E124) Sodium 0.05 mg

Pink-coloured pour-on suspension

#### 3. TARGET SPECIES

Sheep

#### 4. INDICATIONS FOR USE

Prevention of blowfly strike due to *Lucilia sericata* on sheep.

Prevention of blowfly strike due to *Wohlfahrtia magnifica* on sheep.

#### 5. CONTRAINDICATIONS

Do not use in sheep producing milk for human consumption.

Do not use in case of hypersensitivity to the active substance or any of the excipients.

#### 6. SPECIAL WARNING(S)

Special warnings:

Unnecessary use of antiparasitics or use deviating from the instructions given in the SPC may increase the resistance selection pressure and lead to reduced efficacy. The decision to use the product should be based on confirmation of the parasitic species and burden, or of the risk of infestation based on its epidemiological features, for each flock.

Special precautions for safe use in the target species:

The veterinary medicinal product is best applied before an anticipated blowfly challenge, or when a blowfly challenge is identified on or in the vicinity of the farm. Established strikes may require a separate treatment with a knockdown insecticide. It is recommended that animals with dirty back-ends are dagged prior to application. If dagging or crutching is undertaken in the weeks following application, these animals should be re-treated, otherwise protection could be lost. Do not apply during heavy rainfall, or when such conditions are expected. The resulting wash out may reduce the protection period.

Special precautions to be taken by the person administering the veterinary medicinal product to animals:

Operators should wear synthetic rubber gloves, a face mask and PVC trousers when applying the veterinary medicinal product.

In case of skin contact remove contaminated clothing and thoroughly wash the affected parts of the body with soap and water.

In case of eye contact rinse eyes with clean water for several minutes and contact physician for advice.

In case of accidental ingestion seek medical advice immediately and show the package leaflet or the label to the physician.

Always wash hands with soap and water after handling sheep and before eating and drinking or smoking.

Wash hands and exposed skin after working with recently treated sheep. Do not eat, drink or smoke whilst using the veterinary medicinal product.

Handling sheep in the weeks following treatment:

Do not shear sheep in the 3 months after treatment.

Handle sheep as little as possible after treatment as residues remain on the fleece for some weeks.

If you need to handle sheep after treatment, wear coveralls and Wellington boots. If sheep are wet also wear waterproof trousers and coat.

Special precautions for the protection of the environment:

The use of the veterinary medicinal product has harmful effects on dung flies.

Treated sheep **must** be kept away from watercourses for at least one hour after treatment. There is **serious** risk to aquatic life if this advice is not followed.

Pregnancy and lactation:

The safety of the veterinary medicinal product has not been established during pregnancy or lactation.

Use only according to the benefit-risk assessment by the responsible veterinarian.

Laboratory studies in rats and rabbits have not produced any evidence of teratogenic, foetotoxic, or maternotoxic effects.

Interaction with other medicinal products and other forms of interaction:

None known.

Overdose:

An overdose of up to at least 5 times the recommended dose does not lead to any signs of local or systemic intolerance. An antidote is not known.

**For Animal Treatment Only.**

**Keep out of sight and reach of children.**

## 7. ADVERSE EVENTS

Target species: Sheep.

None known.

Reporting adverse events is important. It allows continuous safety monitoring of a product. If you notice any side effects, even those not already listed in this package leaflet, or you think that the medicine has not worked, please contact, in the first instance, your veterinarian. You can also report any adverse events to the marketing authorisation holder using the contact details at the end of this leaflet, or via your national reporting system.

## 8. DOSAGE FOR EACH SPECIES, ROUTE(S) AND METHOD OF ADMINISTRATION

For external use only.

The veterinary medicinal product is applied according to the following recommendations:

Body weight (kg)	Dose Volume (ml)
10 – 20	20
21 – 30	25
31 – 50	30
>50	35

(Guide dose volumes correspond to 0.6 – 2 ml (30 – 100 mg dicyclanil) per kg bodyweight).

Shake the container well before use.

The veterinary medicinal product must be applied with a manual or automatic dosing gun (e.g. Elanco Pour-on gun), with a spray nozzle, which guarantees the correct spreading of the product on the fleece. Best results will be achieved by holding the gun approximately 45 cm from the sheep during application. Apply as a fan spray using a 4 stroke method as shown in the pictogram along the spine of the animal in a band at least 10 cm wide from the middle of the shoulders and in an arc around the crutch and tail. Half the dose should be applied along the spine with the remainder over the tail and crutch area.

The veterinary medicinal product is administered once, before predicted Wohlfahrtia fly activity, or before or at the beginning of Lucilia fly activity. The veterinary medicinal product will protect against blowfly strike caused by Wohlfahrtia or Lucilia flies for 16 weeks. In individual cases, a strike may occur earlier; therefore, it is good practice to check animals regularly for blowfly strike.

Do not shear sheep in the 3 months after treatment.

## **9. ADVICE ON CORRECT ADMINISTRATION**

Please refer to section on “Special Warnings” for further advice on administration.

## **10. WITHDRAWAL PERIOD(S)**

Meat and offal: 40 days

Not authorised for use in animals producing milk for human consumption.

## **11. SPECIAL STORAGE PRECAUTIONS**

Keep out of the sight and reach of children.

Protect from frost.

Store in the original container.

Keep the container tightly closed.

Protect from direct sunlight.

Do not use this veterinary medicinal product after the expiry date which is stated on the label after Exp.. The expiry date refers to the last day of that month.

Shelf life after first opening the container: 1 year.

When the container is opened for the first time, using the in-use shelf-life which is specified on this package leaflet, the date on which any product remaining in the container should be discarded should be determined. This discard date should be written in the space provided.

## **12. SPECIAL PRECAUTIONS FOR DISPOSAL**

Medicines should not be disposed of via wastewater. The veterinary medicinal product should not enter water courses as dicyclanil may be dangerous for fish and other aquatic organisms.

Any unused veterinary medicinal product or waste materials derived from such veterinary medicinal product should be disposed of in accordance with local requirements.

Ask your veterinary surgeon or pharmacist how to dispose of medicines no longer required. These measures should help protect the environment

## **13. CLASSIFICATION OF VETERINARY MEDICINAL PRODUCTS**

Veterinary medicinal product subject to prescription.

## **14. MARKETING AUTHORISATION NUMBERS AND PACK SIZES**

The pack is composed of pigmented white opaque polyethylene back pack container with blue polypropylene screw cap, containing 0.8, 2.2 or 5 litres of finished product.

Not all pack sizes may be marketed.

Vm 00879/5011
